

Series 52

Weight Sensitive Accessories

Oslo Series 52 is also available with a number of special features denoted ID *WS (weight sensitive). *WS has been designed into the respective components to break away should it be important for the track not to support a sudden increase undesirable load.

We have prioritized the preferred order in which these components break away, this in effect will couple the size of the track restoration job to the size of the collimate that caused the breakage in the first place.

These fetures are listed in the order they will break away;

- Item (1) * 5252WS Weight sensitive nylon curtain hook
- Item (2) * 5231WS Weight sensitive swivel track runner
- Item (3) * 5253LWS Top fix bracket incorporating weight sensitive nylon track lock tongue

Oslo Series 52WS tracks assembled using the above component items 1 & 2 will have the effect of breaking away when subjected to a sudden load of 5kg weight is elevated 15cm above floor level and dropped suddenly.

Item 3 will break away if a sudden weight of 10kg or more is elevated 15cm above floor level and dropped suddenly.

** As to conform with the expectation that the Oslo Series 52WS should break away under a certain required loads it should be noted that all fixing mechanisms attaching brackets to walls or ceilings or in fact any surface should be given special consideration by your design team. Variations in buiding methods and materials will require a variety of fixing systems to be considered and specified.
