

# Series 52

## Weight Sensitive Accessories

**Oslo Series 52** is also available with a number of special features denoted \*WS (weight sensitive). \*WS has been designed into the respective components to break away should it be important for the track not to support a sudden increase or undesirable load.

We have listed below the order in which these components break away, this in effect will couple the size of the track restoration to the size of the collimate that caused the breakage in the first place.

Item (1) \* 5230WS Weight sensitive nylon curtain hook

Item (2) \* 5231WS Weight sensitive swivel carrier

Item (3) \* 5253LWS Top fix bracket incorporating weight sensitive nylon track lock tongue

**Series 52WS** tracks assembled and installed correctly using the components items 1 & 2 listed above has been designed and tested to break away if a weight of 5kg's or more is attached and elevated by 15cm then released. This special feature has been deliberately built in to ensure sudden and undesirable loads can not be supported by or WS\* product.

Item 3 will break away if a weight of 10kg or more is elevated 15cm above floor level and dropped suddenly.

“As to conform with the expectation that the Oslo Series 52\*WS should break away under certain required loads it should be noted that all fixing mechanisms attaching brackets to walls or ceilings or in fact any surface should be given special consideration by your design team. Variations in building methods and materials will require a variety of fixing systems to be considered when specifying Oslo Products
