

Series 52

Heavy Domestic Tracking System

Oslo Series 52 is a strong domestic or light commercial tracking system suitable for heavy usage areas such as hotels, motels, and clubs etc. The two wheeled runners each carry a working load of 2.5kg allowing for a smooth operation in both bent and straight tracks.

Oslo Series 52 is an extruded aluminium track section that can be bent to a fixed radius of 180mm as a hand drawn track only. Corded tracks can only be in straight sections. Constant radius curves are available through specialist outlets. A comprehensive range of bracketing helps solve the most difficult installation problems.

Available in custom made to measure or as bulk componentry in White and Silver.
